Dr. Logsdon,

I assume you mean Wednesday the 26th.

For the show, I'd recommend "MoonBeings," because "When the Universe Was Young" is more academically challenging, and I don't want new students here who haven't yet taken an intro to Astronomy course feeling dumb.

Wed 26 July
MoonBeings

Fantastic! I would love to come on Wednesday the 24th.

I am actually very open to about any show. These will be incoming freshmen who will hopefully be able to continue on at WKU for the fall. Is there a particular show you'd recommend? Selfishly, I'd love to see something I've never seen before. I definitely want to avoid PlanetQuest, because if I'm not mistaken, that's the show you're running right now, right? I'd like to encourage them to go see a show on their own.

I'm thinking either MoonBeings or When the Universe Was Young. Which would you recommend?

Thanks,
Jeremy

Dr. Logsdon,

At the moment, that entire week is available at that time slot. You pick your day, and it's yours.

Then you just pick the show. You've done "Spaceship Earth," about moving through space; "Invisible Universe," showing what could be seen at different wavelengths of light; and I think "MoonBeings," about why we ignore planets and look to Moons for possible extraterrestrial life in our solar system. Do you want to run one of those again, or are you looking for another option?

Chris,

We are about to start IDST 199 summer scholars, and I would love to schedule a planetarium visit. I teach 12:30 to 2:10 on Tuesday through Friday afternoon. It would be great if you have availability the week of July 24th, but I'll certainly be flexible.

Thanks,
Jeremy
